

8330-8331

Circus

DESIGN: ALEKSANDER BORGENHOV

Circus is eminently suitable for demanding work in beauty parlours, clinics and laboratories or as a tool for people with impaired vision. Circus has a large lens and patented highly flexible self-balancing arm and shade neck. The shade-neck can be positioned horizontally, vertically and laterally making the luminaire extremely flexible.

TECHNICAL INFORMATION 8330-8331 Circus

Circus is the most advanced illuminated magnifier ever designed. It utilizes the latest lamp technology using a high-intensity 22W circular T5 tube with very good colour rendering capacity. The tube is operated by high-frequency ballast eliminating flickering and prolonging lamp-life. Circus has a very large "free floating" lens of $\varnothing 165\text{mm}$ giving a large field of view with a very narrow frame around it. The large lens permits comfortable viewing with both eyes. A circular light-source is the ideal way of illuminating an object, virtually eliminating shadows. Carefully calculated reflector optics gives a very high light-intensity at focal distance. The fully covered spring-balanced arm makes it easy to position the luminaire in the correct position and makes cleaning easy. A hinged lens cover is standard. It protects the lens from dust and prevents the luminaire from inadvertently turn into a burning glass. 2 different swing-away attachment lenses of 4 and 6 dioptr are available. They swing out from the lens cover when needed. The clean design fits any interior.
