

The right light

8312

Magnifique II

DESIGN: SUZANNE SCHURCH

Magnifique is the ideal tool for people with impaired vision. A very thin, translucent lens frame ensures that eye contact with the object viewed is not lost in transition when switching from magnification to normal viewing and back again.

TECHNICAL INFORMATION 8312 Magnifique II

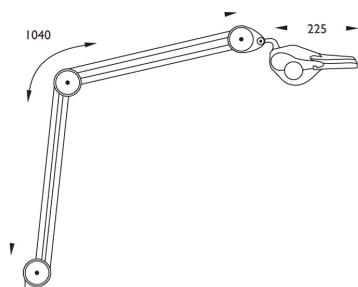

It has a large rectangular lens, 175 x 108 mm, which permits comfortable viewing with both eyes. The lens frame is very thin and made of translucent polycarbonate. The carefully designed optics projects a high level of light onto the object viewed through the lens. The built in electronic ballast further improves viewing comfort. It offers instant start and no flickering or stroboscopic effects. Magnifique comes with a choice of 4 main lenses, 3D, 4D and 6D acrylic lenses as well as a 3.5D glass lens for maximum scratch resistance. The lens has a unique snap-on, snap off feature. It may easily be changed to fit any use. The power switch has been designed to give good tactile feedback, making it easy to find and operate. The lamp is easy to change and available through regular commercial channels, an important detail for end users who keep it at home.
