

The right light

8315

Wave Plus

DESIGN: LUXO / D. SPRANGER

WAVE plus is the ideal magnifier for industrial applications. It is the only magnifier to offer both shadow-free magnification with light coming from both sides, as well as three-dimensional magnification with light coming from the left or right. The 3D-feature is especially welcome when working with circuit boards or similar delicate objects.

TECHNICAL INFORMATION 8315 Wave Plus

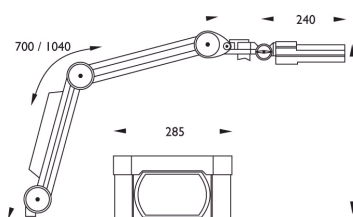

By illuminating from one side only, depth perception is increased and positioning of the objects are made easier. The large rectangular lens, 175 x 108 mm, permits comfortable viewing with both eyes. The slim edge in front of the lens ensures that eye contact with the object viewed is not lost when switching from magnification to normal viewing and back again. The neck joint between the head and arm moves in three planes: horizontally, vertically and laterally making exact positioning easy. A cloth cover is provided to protect the lens from dust and prevent the luminaire from inadvertently turn into a burning glass. For additional magnification, secondary lenses can be fixed to WAVE plus in seconds. A 10D swing-away lens is also available. It clamps onto the head and swings into action when needed.
