

Surflash™

Intravenous catheter

**Visual confirmation
of catheter placement
during venipuncture
occurs in a flash!**

A unique tip design

- SURFLASH™ enables quick and easy confirmation of catheter placement in the vein.
- The catheter is made of polyurethane, which makes it extremely flexible, kink-resistant and durable.
- The radio-opaque stripe on the catheter allows clear x-ray visibility.
- The catheter's puncture resistance level is the same as our TERUMO®'s conventional IV catheter models.

With SURFLASH™, visual confirmation of catheter placement occurs instantaneously due to 'flashback'. Flashback appears between the specially grooved needle and the catheter, providing medical staff with a higher certainty of proper catheter placement.

The specially grooved needle also improves the ability to visualize flashback in patients where venipuncture is more difficult. And because SURFLASH™ is made of

polyurethane, which is firm at room temperature and softer at body temperatures, patient comfort is enhanced, without compromising proper technique.

New flashback feature

NOTE: The needle insertion angle in the illustrations differs from actual insertion angle.

When using SURFLASH™ for venipuncture, follow the same procedures and take the same safety precautions as when using our TERUMO®'s conventional IV catheter models.
