

The innovative shockproof “GAMMAG” Series latex-free sphygmomanometers set a standard in performance, quality and value. A functional and modern design, in combination with a high-quality precision manometer and durable construction, guarantee reliable performance over many years in any clinical environment.

“Single-Tube” Design with exclusive Pressure-Distribution System.

The exclusive pressure-distribution system controls the airflow to the manometer during inflation to provide a smooth and accurate increase in pressure and a long manometer life. With this innovation the GAMMAG-Series now offers an important durability feature previously only available in “double-tube” systems, in a convenient, single-tube design.

GAMMAG Series/Confirmation of clinical validation:

The GAMMAG Series is now clinically-validated under the European Union protocol on hypertension. The validation protocol for the GAMMAG range confirms the long-term accuracy of measurement of the systolic and diastolic blood pressure.

HEINE GAMMAG7®

The model with aluminium alloy construction and precision valve

- ∴ Shockproof.
- ∴ Latex-Free.
- ∴ Exclusive Pressure-Distribution System. (German patent pending).
- ∴ Pressure-Proof Manometer. Ensures durability and reliability.
- ∴ Micro-Filter. Protects valve and manometer.
- ∴ Large-diameter Scale. 56mm diameter black-on-white scale is easy to read.
- ∴ High Quality Indicator. Precisely calibrated, durable and shock resistant.
- ∴ Large Insufflation Bulb. 50 % larger Bulb Volume for fast inflation of the cuff.
- ∴ Exclusive Air-Release Valve. Provides fine and precise air release rate adjustment, quick deflation, and extreme durability. A rubber-stop prevents valve-lock.
- ∴ Housing Upper made of aluminium alloy. Advanced thermo plastics (Polyamid / TP Elastomer) with a shock absorbing ring protects indicator and glass.
