ISO module and functional trolleys for the clinic

keo ®
by HAEBERLE

HAEBERLE's creative trolley system opens new dimensions for form and functionality conscious people. With the new **keo**® system you are able to create almost any type of functional trolley in a standardized design for your clinic. With its drawers, module full-pull-outs or elegant roller blinds of various heights, **keo**® optimally adapts to your furnishing ideas and your modern ambience. Flexible module support walls make it possible to accommodate ISO module baskets of all conventional brands – even at a later date. A new organisation concept provides uncluttered work surfaces.

... as supply trolleys, anaesthetic trolleys, ward trolleys, module trolleys, dressing trolleys, emergency trolleys ...

The technology

- a rugged, torsionally stiff sheet metal construction of galvanized, high-quality, coated sheet metal. Resistant to disinfectants, easy to clean and light-resistant. Free of drumming due to single-tray construction. Very low weight!
- 4 elegant, anodised aluminium support profiles for mounting accessories. Subsequent mounting of accessories is also possible.
- an elegant, anodised aluminium push handle is standard.
- all module full-pull-outs are provided with an inset frame suitable for all conventional ISO module baskets. The pull-out is extendable up to approx. 110%, so that the module contents are comfortably and easily removable.
- drawers are equipped also with full-pull-outs (110%).
- inset frames and drawers with ball bearing telescopic guidance with self pull-in for easy gliding and comfortable use.
- high-quality, 125 mm Ø, smoothly-running castors with 2 brakes and with wall guards are standard. Electrically conductive castors are available at an additional price.
- total load of the trolleys up to approx. 130 kg.

The most important dimensions

Case width:	634 mm
Case depth:	485 mm
Case height, incl. castors:	918 and 1244 mm
Overall width (incl. 1 push handle and wall guards):	810 mm
Overall depth (incl. wall guards):	580 mm
